Automated transport: settling things on four levels

Admission to the market (type approval)

Fit for granting market access?

Admission to the road?

How to interact with other road users?

Arranging liability and insureability

What if things go wrong?

Smart deployment

How to gain maximal societal benefits?

3

A new European initiative on the deployment and use of automated transport

o **Sharing information about:**

    o The integration of automated road transport in existing mobility systems

    o Responsibilities and liabilities

    o Use cases with added societal value

o **Exchanging best practices**

o **Favouring mutual understanding**

o **Optionally producing recommendations for coordinated action**

First series of topics to discuss (proposal)

- 👍 Promising use cases: what, why and under what conditions?

- ⚖ Juridical views on responsibility and liability attribution

- 🚗 Regulating the circulation of automated vehicles in mixed-traffic

- 🚓 Implications for traffic enforcement

- 🚦 Monitoring the (societal) effects in daily traffic

- 👥 Involvement of the general public
